

About Nexttick

What we do

We provide full stack development teams in an on site / remote model. We focus our efforts on Node and Javascript and understand the complexities and competitiveness of building a world class team. We have worked tirelessly to amass a leading network of consultants from around Europe enabling us to remain competitive whilst adhering to our extremely high standards.

We know that quality is dispersed and not based in a single geographical location.

We work with you, on site, to gain a deep understanding of your requirements and efficiently distribute this knowledge to your carefully selected remote consulting team.

Our consultants are multi-disciplined and cross functional, resulting in excellent communication and project understanding. Each consultant has a detailed understanding of the team's roles and responsibilities, allowing us to stay agile and absorb business change.

How it works

Our preferred team structure begins with a **technical delivery manager**, who is primarily responsible for bridging the gap between the business and technology. A key decision maker who will advise on the most appropriate technology solutions, will also communicate product delivery whilst building communities around your products.

Our **on site software consultants** primary responsibility is to deliver any frontend software requirements, and to provide support to the project stakeholders. the consultant may also be responsible for liaising with the business to ensure requirements are ready for development In lieu of a delivery manager.

Our **remote software consultants** primary responsibility is to work as a systems architect and support the on premise consultants by building out APIs, managing data and production releases. The consultant may also be responsible for configuring continuous delivery pipelines In lieu of a devops consultant.

We are flexible and will work with you to construct the team that best fulfils your requirements.

Team

Ian Crowther - Founder & CEO

Ian is a leading member of the Node community and has extensive experience in delivering high profile projects. Ian builds self sufficient, pro-active teams who have a reputation for delivering high quality results.

Ian's last engagement at British Gas contributed to the product winning 15 industry awards in areas such as best app, industry innovation & best customer service.

Orlando Kalossakas - Business Development

Orlando is a leading member of the London development community and his contributions reach out into a wide range of disciplines.

In recent years he has been working as a product evangelist building up an extensive international network of developers and outsource partners.

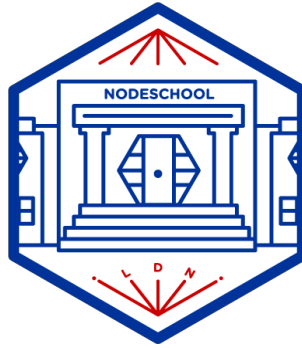

Community

Our team is committed to building and educating the Node community and organize the following London & International meetups:

London Node User Group

Nodeschool London

Nodeschool International Day

London Node User Group is the largest Node meetup in Europe with up to 180 attendees a month. LNUG regularly hosts speakers from around the world.

Nodeschool is a community driven set of workshops to teach Node and Javascript. Nodeschool International Day is the coming together of each school across the globe within a 24 hour period to host an unique learning experience.

We have made substantial contributions to the following conferences. All of which enable us to sustain and grow our impressive network.
